Patient Name: John Dela Cruz
Age/Sex: 34 / Male
Date: October 25, 2025

Chief Complaint

Persistent cough and mild fever for one week.

History of Present Illness

The patient reports a dry cough that began 7 days ago, accompanied by low-grade fever (37.8°C), fatigue, and mild sore throat. No chest pain, shortness of breath, or sputum production noted. No known exposure to COVID-19 or tuberculosis.

Physical Examination

- Temperature: 38.0°C
- Respiratory rate: 18 breaths/min
- Lungs: Mild rhonchi on the right lower lobe
- Throat: Slight erythema, no exudates
- Heart rate: 88 bpm, regular

Assessment / Diagnosis

Primary Diagnosis: Acute bronchitis (J20.9)
Differential Diagnoses:

- Viral upper respiratory tract infection
- Mild COVID-19 infection
- Early pneumonia

Plan / Recommendations

1. Prescribe symptomatic treatment (paracetamol, rest, hydration).
2. Avoid smoking or exposure to irritants.
3. Monitor temperature and symptoms.
4. Follow up after 5–7 days or sooner if symptoms worsen.

5. If cough persists beyond 2 weeks, consider chest X-ray.
